WHY THIS IS IMPORTANT
Irresponsible reporting and messaging following a suicide death may result in ‘copycat’ suicide attempts, also referred to as suicide contagion. This phenomenon, known as the Werther Effect, is known to contribute to elevated suicide rates (see WHO/MSD/MER/17.5 from the World Health Organization). This effect has been demonstrated for many methods of suicide, including those that occur on the railway system. Details that are associated with increased risk of contagion may seem critical to the story and are thus included (e.g., the exact location of the incident). However, there are ways to inform the public while still ensuring that the information being communicated is done in a way that reduces the likelihood of imitation by other vulnerable individuals.

The media can also be a tremendous resource for those at risk by encouraging vulnerable individuals to seek help, changing public perceptions, and correcting myths about mental health and suicide. Media can inspire hope and provide resources to those at risk for suicide. By being informed on best practices, the media can play a positive role in suicide prevention.

CONCEPTS THAT INCREASE CONTAGION

PERCEIVING SUICIDE AS COMMON
Including “suicide” in the headline of an article or using language that exaggerates rates of suicide (e.g., “epidemic”, “skyrocketing”) has the potential to mislead the public into thinking suicide is more common than it actually is, and therefore is a common response to life’s struggles. Headlines are especially important as they allow information to quickly spread online and through social media to influence public perceptions.

IDENTIFYING WITH SOMEONE WHO HAS DIED BY SUICIDE
Elements of an article that glorify the deceased or provide personal details may prompt a vulnerable reader to identify with the deceased in a way that may make a similar path to suicide more approachable. Similarly, attributing a suicide death to a single cause (e.g., loss of job) oversimplifies the complexities of suicide in a way that might mislead the public or make existing thoughts of suicide more salient following similar life events.

VISUALIZING A PARTICULAR METHOD
Providing details about the location of a suicide or the actions of the deceased (e.g., jumped in front of a train) may prompt individuals already considering suicide to more clearly imagine the event happening, possibly leading them to identify with the specific method reported.

PROMOTING MYTHS THAT RAIL DEATH IS QUICK AND/OR CERTAIN
Emphasis on lethality or the convenience/accessibility of the rail system may be read as a confirmation that the rail system is a viable means for suicide. This idea can be reinforced with the use of terminology relating to instant or certain death when someone is struck by a train.
OFFER RESOURCES AND INSPIRE HOPE

MESSAGING OF HOPE
Consider crafting content that inspires hope and highlight individuals overcoming suicidal thoughts. These articles can help provide a counterpoint to more common reports of individuals dying by suicide. These types of stories have been shown to reduce suicide rates (referred to as the Papageno Effect, also discussed in WHO/MSD/MER/17.5).

WHEN REPORTING ABOUT A RAILWAY SUICIDE
There is always a choice about whether to discuss an incident as a suicide or simply as a fatality on the railway. If a decision is made to report on the incident as a suicide, consider offering helpful information or resources for vulnerable individuals who may read this story. Consider including information about warning signs for those at risk (e.g., see www.afsp.org) as well as resources where vulnerable individuals may seek help (see below).

Also consider the impact of the story on train crews. Train operators are powerless to quickly stop a train if a person is on the tracks. Language that implies fault, such as “train kills person”, may add stress to an already challenging time in that train crew’s life.

### SPECIFIC REPORTING LANGUAGE: DOS AND DON’TS

**INSTEAD OF...**
- Local Man Commits Suicide at Broadway Station
- Suicide on Springfield Line of General Railroad
- The death occurred after the man jumped from the south end of the platform as the train entered Broadway station
- She faced the train with her head looking up and her arms outstretched as the train struck and killed her
- Train kills person
- Images of memorials or grieving friends
- Images of trains or train platforms

**CONSIDER...**
- Local Man Died on Tuesday Afternoon
- Woman Trespassing on General Railroad Tracks Struck and Killed
- The man was struck and killed near Broadway Station.
- After trespassing onto the railroad tracks the woman was struck and killed by the train.
- It appears that the actions of the individual were intentional.
- Person struck by train
- School photo or work photo
- No photo or stock photos (e.g., caution tape)
